

NEW HARDWARE | ORDERING | PAYMENTS | BOOKINGS

Faster tills. Easier orders. More payment choice.

This month we are highlighting the SAM4S Sapphire, table ordering, handheld order and payment options, Google bookings, staffing data and wider card machine choice.

The new SAM4S Sapphire has landed.

For sites wanting a faster till with 5 years warranty and peace of mind, the Sapphire is the replacement for the S-360 that has been our most popular model for years.

The headline is speed: the Sapphire N95 processor is at least three times faster than the S-360, so signing on, selling and reporting feel more instant.

**£945
per till**

Includes a 5 year warranty and on-site installation. Most sites start with the busiest till, so you do not have to change everything at once.

ICRTouch

Connected ordering, cloud tools, reservations, loyalty, stock and reporting.

CES Touch

Modular EPOS for hospitality, retail, wholesale and newsagent workflows.

Payments

Dojo, Teya, Worldpay, CashFlows and Clover card machine options.

Local Support Team

Supplied, installed, repaired and supported by our local team.

ORDERING OPTIONS

Take orders without sending staff back and forth.

Orders can move from customer or staff device straight onto the till and through to the kitchen, with fewer walks to the till and fewer details being re-keyed.

ByTable

Customers scan a QR code on the table, view your menu on their own phone, then order and pay from there. Orders land on the till against the right table and go to the kitchen.

TouchTakeaway

Collection and delivery ordering on a page branded as your own. Orders drop into the till automatically, and you pay for the software rather than commission on every order.

Google bookings

ICRTouch Reservations can integrate with Google, letting customers book from search results. Bookings flow to the till and show clearly on the table plan.

Kitchen flow

Orders can be routed to kitchen printers or preparation screens, with table plans, open checks and course control keeping the team in sync.

POCKETTOUCH + DOJO POCKET

One handheld for the order and the payment.

PocketTouch lets staff take orders at the table and send them to the kitchen before they leave the customer.

It can now run on the Dojo Pocket card machine, so one device can take the order, send it through, and take card payment with the total passed across.

ICRTOUCH ECOSYSTEM

From till point to customer ordering and back office.

ICRTouch is especially strong for connected hospitality workflows, while still offering useful retail tools for loyalty, stock, reporting and customer engagement.

- Payment integrations

Retail and specialist

- Customer loyalty
- Barcode and stock tools
- Scale links
- Newsround for newsagents
- Wholesale accounts and links
- Xero integration

BEST FIT

Sector-specific setups without forcing one template.

CES Touch is a strong fit where the setup needs to match the trade closely, such as hospitality, retail, wholesale accounts, delivery rounds or newsagent-specific tasks.

PAYMENT CHOICE

We can supply the card machines that suit your setup.

EPOS North can supply and support card payment options from Dojo, Teya, Worldpay, CashFlows and Clover, helping match the terminal, rates and EPOS integration to the site.

DOJO

Including Dojo Pocket options for order and payment workflows.

 **teya**

Card machine options for everyday hospitality and retail trading.

worldpay

Established payment provider options for EPOS setups.

Cashflows

Payment processing options that can suit integrated sites.

 **clover**

Card machine and payment options available through EPOS North.

Dojo 12 month fixed rate

Dojo are offering a 12 month fixed rate contract, meaning the rates you sign up on will not change for a full year.

For a comparison quote, contact Gavin MacDonald at gavin.macdonald1@paymentsense.com.

Bizimply integration

ICRTouch can integrate with Bizimply, pulling net sales into workforce management automatically each day.

That helps calculate labour-to-sales percentage, compare staffing against real demand and reduce spreadsheet work.
